

► 6U cPCI 128-Channel Isolated Digital I/O Board

The 128-Channel Digital Input/Output (I/O) Board provides 64 opto-isolated digital output channels, each with internal output status feedback, as well as plus 64 opto-isolated digital input channels on a single 6U CompactPCI board. Field-Programmable Gate Arrays (FPGAs) are used to provide access to the digital data over the PCI bus.

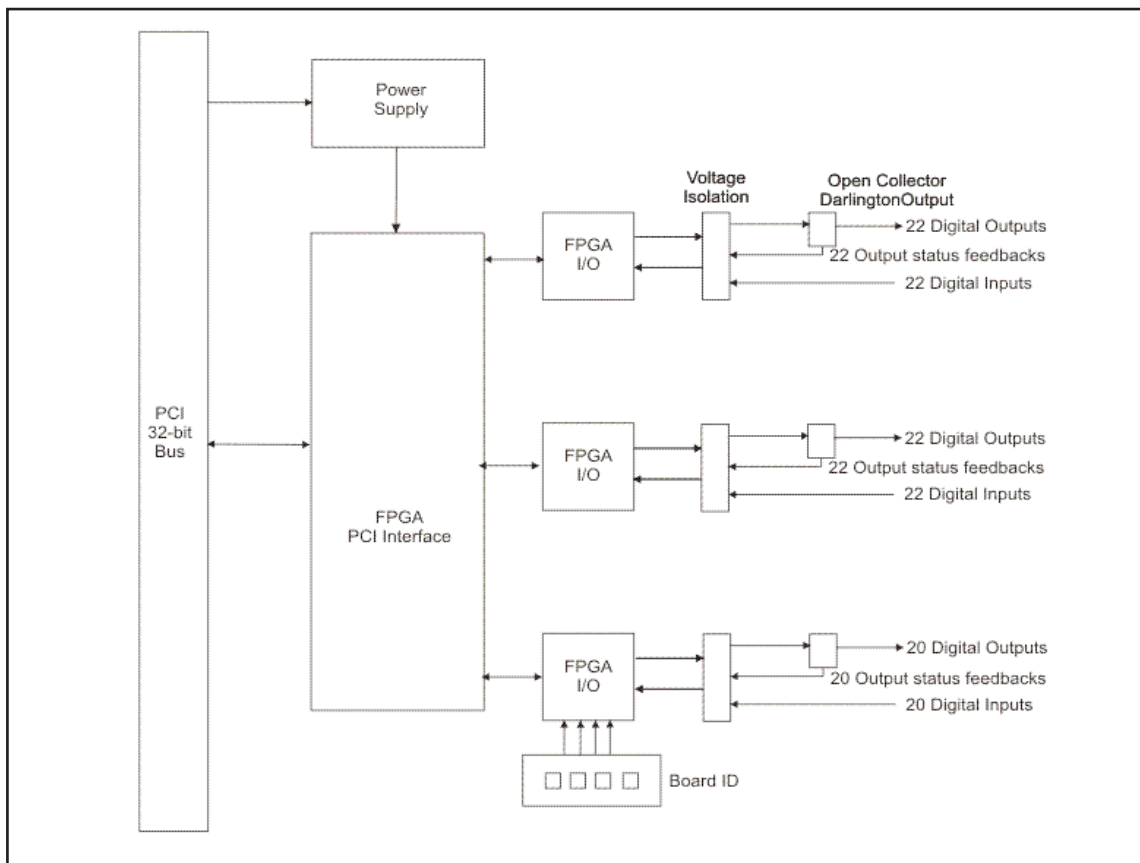

I/O channels to system isolation is 2 500 V RMS.

Architecture

A set of FPGAs is used to control the 64 output channels and read the 64 input channels. Another FPGA is used to provide the PCI interface. Dual-LED optocouplers on all input and output channels provide voltage isolation, while the outputs are driven by high-voltage Darlington transistor arrays.

Features

- wide input range (3 V to 35 V)
- wide output range (3 V to 35 V)
- Air-Cooled and Conduction-Cooled versions
- Commercial, Industrial and Ruggedised grades
- programmable inputs and outputs
- high output sink current (up to 300 mA)
- very high number of digital inputs and digital outputs
- internal output feedback
- I/O channel voltage isolation
- board identification switch
- DC or AC inputs

Bus Interface	PICMG 2.0 (R3.0) 6U CompactPCI 32 bit, 33 MHz 3,3 V PCI signalling, 5 V tolerant		
Digital Outputs	64	Optically Isolated Open Collector Darlington Transistor	
Digital Inputs	64	Optically Isolated DC (AC optional on 8 inputs)
