

► 32-Channel Isolated Digital Output PMC Adapter

The 32-Channel Isolated Digital Output adapter provides 32 opto-isolated digital output channels on a single PMC adapter. A Field-Programmable Gate Array (FPGA) is used to provide access to the digital data over the PCI bus.

Output channel to PMC isolation is 2 500 V RMS.

Architecture

A FPGA is used to control the 32 output channels and provide the PCI interface. Isolation is achieved by optocouplers on all channels, and the outputs are driven by high-voltage Darlington arrays.

Block Diagram of the 32-Channel Isolated Digital Output PMC Adapter

Features

- high output sink current (up to 300 mA)
- wide output range (3 V to 35 V)
- Air-Cooled and Conduction-Cooled versions
- Commercial, Industrial and Ruggedised grades
- adapter identification switch
- programmable outputs
- output channel to PMC voltage isolation
