

► 8-Channel Isolated Serial I/O PMC Adapter

The 8-Channel Serial Input/Output (I/O) PMC Adapter provides eight channels of simultaneous, bidirectional Universal Asynchronous Receiver / Transmitter (UART) serial communications in PMC formfactor. Seven channels are individually configurable as RS-232 or RS-422 by means of a DIP switch. The adapter conforms to the PCI Local Bus Specification Rev. 2.3.

All serial I/O lines have voltage isolation to 2 500 Volts.

A 4-channel version is available as a lower cost option.

Architecture

The Serial I/O Adapter employ a high performance, industry standard 16550 compatible, 8-channel PCI-based UART. The serial I/O channels are connected to both RS-232 and RS-422 transceivers. The transceivers are enabled or disabled by a configuration Dual In-line Package (DIP) switch.

Features

- Direct low-level control of the serial communication channels
- Supports many different combinations of RS-232 and RS-422 communications interfaces simultaneously
- Voltage isolation on all serial I/O lines

Applications

- Mission-critical I/O
- Intrinsically safe environments
